

Review for Tracery Professional Builders

karasik

Worked with our architect to get the best design to salvage our great room that had extensive termite damage, rat infestation in the crawl space, and needed a seismic upgrade. Builder is a structural engineer and very experienced with materials and used high quality subcontractors. Good communicator, transparent with written bids, change orders and fees. Great supervision of his crews and the subcontractors. Very accessible by phone, provided updates on weekly schedules. Very flexible with changes in the work order and interested that we were getting the renovation we wanted. Quality work at a fair price.
