

## Review for Tracery Professional Builders

thecause

★★★★★

We now have the best looking house on the block. This project started with new bay windows, but the water and termite damage was extensive around the front of the house. Everything that this company touch is now better, weather tight, and even build stronger for the earthquake that will be coming. (You know, California, so more rebar and sideplates for the foundation).

It's not just the quality construction, but the head of the company, Mark, pays so much attention to detail and how his work is going to look. Simple things like where to put vents, lights, painting, and making sure the stonework is up to his standards. (very high)

There is so much quality work that goes with this company and we are starting another job with them in a month in dining room and living room areas. It will be done right. :)
